Hi im completly new to openvz.

i try this

vzpkgcache -f centos-4-x86_64-minimal

and get tons of erros.

i use a openvz on x86_64

thanks in advance for any help
Vento.

```
  Installing: zlib                  ########################## [11/78]
could not open ts_done file: [Errno 2] No such file or directory:
'/vz/root/100001/var/lib/yum/transaction-done.2008-08-06.20: 07.07'
  Installing: mktemp                ########################## [12/78]
could not open ts_done file: [Errno 2] No such file or directory:

Hi,

I haven't gone deeply into your problem just come across the same topic and seems to me there is workaround here. Please look at that thread:
