hello all!

i just finished building an opensuse 10.3 template..
i installed yum and so on.. after alot of hassle..!
now that im done.. whenever i try to install a certain package.. this happens!
i tried deleting the template and doing another! same thing happened..
any advice?!

i gave the template triple the ram it had and doubled its quota as well as cpu units and percentage! and tht didnt solve anything..

any help?!

--> Running transaction check

Dependencies Resolved

```
 ================================================================================
 Package              Arch       Version          Repository       Size
 ================================================================================
Installing:
 ConnectServer        i586       2-5.0            ConnectServer-2-5.0.i586.rpm  306 M
Installing for dependencies:
 Xdialog              i586       2.1.2-39         base             304 k
 compat-libstdc++     i586       5.0.7-41         base             228 k
 glib                 i586       1.2.10-627       base             114 k
 gtk                  i586       1.2.10-926       base             774 k
