My HN and VE are both centos5 x86\_64. When starting the firewall I'm getting this error in the VE:

iptables: Unknown error 18446744073709551615

I'm unable to make any outbound connections from the VE, e.g. using wget, yum update, etc.

Any ideas?

Please verify if the xt\_tcpudp module is loaded.
