Dear all

I am glad to receive howtos from the community
here comes for gentoo

http://gentoo-wiki.com/HOWTO_to_Get_WebVZ_2.0_on_Gentoo_to_A dministrate_OpenVZ

Nice howto, but from the howto i got the impression that webvz needs to be installed on openvz HN and it can administer only this HN VEs, or migrate the VEs to other HN.

What I want is to install webvz inside VE and administer from it
several independent openvz clusters. (By cluster here i mean, a set of several HNs which can migrate VEs between them).
So is it possible io use WEBVZ in VE and administer several HNs from it?

Thanks
Alex

Hi

At the moment webvz only administers one HN per installation.

I mentioned in one of the thread that I am planning to make webvz-ms ms= multiple server which does what you said. I might start working on that next month.

Moreover, I am looking for ruby on rails programmer to help me in that and make the development of webvz faster.

webvz is available on github and anyone can fork.

Thanks
