Subject: How to make changes to resource limits take effect without a vps restart?

I just had a production machine run out of inodes...

I changed the config file, and didn't know how else to make it take effect so I restarted the vps...

since this is a production site, I would have much rather have had this take effect w/o a vps reboot, but I coulden't find a command to do it...

I did google arround a bit, but my search:
openvz vz-scripts reload configuration

returned tons of unrelated stuff that wasn't helping...

Thanks for your help.

-Eric

try to use
--setmod restart
