Subject: Adding IPs with different gateways on the HN

So I've setup my initial VE and everything worked great. I was given two static IPs from my server provider. One for the HN and one for the VE. They are 209.17.191.xxx/23 with the gateway 209.17.191.1. Since everything was working how I wanted I ordered 5 more static IPs. However, these IPs are 209.17.186.xxx/23 with the gateway of 209.17.186.1. Now, what do I need to do to get these new IPs working in some new VEs? This is all on CentOS 5 HN and VEs.

Thanks for any help.
