[root@localhost ~]# vzctl destroy 101
Bus error

what dose this error mean?

Are there any messages in /var/log/messages?
What kernel do you use?
And also what hardware is on your node?

Thanks.

Seems that kernel can't load some pages from swap due to some I/O errors...
Is this error permanent? I mean you can't destroy VPS even after reboot?

Thanks for information.

Please, try the following items to solve the problem:

Check that your disk works in right DMA mode.
Check your disk for bad blocks.

Try compiling
CONFIG_IDEDISK_MULTI_MODE = y
into your running kernel. That should do the trick if it doesn't contain bad blocks.
