Anyone know what happened to the Lenny packages in the Debian openvz.org repositories? Both http://download.openvz.org/debian/dists/ and http://download.openvz.org/debian-systs/dists/ just contain Etch, while http://wiki.openvz.org/Installation_on_Debian and http://www.howtoforge.com/installing-and-using-openvz-on-ubu ntu-8.10 mention there was Lenny packages there.

I guess I will just try the Etch packages on Ubuntu 8.10 for now.

Lenny comes with kernel and userland tools available in main, there is no need for third party repositories.

aptitude install linux-image-openvz-686 vzctl vzquota

Reboot and you are ready to go.
