Subject: How to restart VE network

Hi All
I've simple venet networks in the VE's (ubuntu gutsy) on a CentOS HN. For some reason, the HN lost network connectivity and I had to
manually restart network on the HN. However, now all VEs are unreachable - in order to get them back on, I must restart each VE.
Is there a better way to bring the VEs on network after HN network has been restarted (other than vzctl restart) ?

Please advise.
thanks
