Subject: Asterisk conference and DAHDI (SOLVED)

Hello Folks,

I am running an Asterisk based distro called Elastix in a VE. The Music on Hold works but I tried for hours to get the conference working without success. I created a conference number 3000 with PIN of 1234. I dial into the conference and I am prompted for the PIN but when I enter the PIN I get that is not a valid conference PIN number.

The attached log shows:
"app_meetme.c: Unable to open pseudo device"

The problem is that Elastix has Asterisk 1.4.23 and is using DAHDI which is due to replace Ztdummy so when I followed this:

http://wiki.openvz.org/Asterisk_from_source

it didn't help much.

I even downloaded the Asterisk 1.4.24 and recompiled Asterisk but that didn't help either. Please see the attached log.

The CLI shows that the DAHDI modules are loaded:

```
el*CLI> module reload chan_dahdi.so
    -- Reloading module 'chan_dahdi.so' (DAHDI Telephony w/PRI)
  == Parsing '/etc/asterisk/chan_dahdi.conf': Found
  == Parsing '/etc/asterisk/dahdi-channels.conf': Found
  == Parsing '/etc/asterisk/chan_dahdi_additional.conf': Found
  == Parsing '/etc/asterisk/users.conf': Found
el*CLI>
```

Any ideas please?

regards,

Kabong2008

Hi Errol,

I've never used asterisk but
- make sure that all needed kernel modules are loaded on the HN
- make sure that all needed devices exist inside VE (/dev directory)
BTW, I found this link

http://www.elastix.org/index.php?option=com_fireboard&fu
nc=view&catid=31&id=18202&Itemid=55

Hi Marat,

I had resolved it earlier by just following the principles for doing it for Zaptel. I would like to do a How to for the wiki would that be okay?

regards,

Errol

hello
i have install openvz and webvz...
the problem is now, i cannot migrate the container using both of the tools....
when do it in the openvz....
the eeror said, you dont have vzmigrate command..
do we need to install the vzmigrate command in the container...
and one more thing, do we have internet connection in the container created...
webVz also cannot migrate the container...
can someone help me
thanx...

Can you please start a new thread with this message. This post has nothing to do with the current thread.

http://wiki.openvz.org/Creating_a_CentOS_5.0_Template

You need to dedicated machine for this though.
