Subject: Running OpenVZ as a XEN Guest

I've come across the following links below and I'm interested to have a similar setup.

http://wiki.openvz.org/News/announcements/OpenVZ_on_Xen
http://wiki.openvz.org/Xen

The above links discuss about running OpenVZ inside a XEN guess (DOMu)... The article seems to indicate that this setup will run on RHEL5 Host OS. I wanted to confirm if this is only for RHEL5 this can be done. I'd like to use Debian 5 as the host os - Is that possible also? This will be a intel based machine that supports VTx - 8G RAM.

Also, I would appreciate any comments/suggestions from anyone who has actually set this up - especially on debian host os. I'd like to know about any pros & cons to this setup as a production.

Thanks - Joe
