What could possibly cause df to output the wrong output? I have an OpenVZ virtual environment that hosts large data files, however, there is a huge mismatch between du and df output:

```
$ du -sh /miroir/
90G /miroir/
$ df -h
Filesystem            Size  Used Avail Use% Mounted on
/dev/simfs            191G  8.0G  183G   5% /
none                  3.9G  4.0K  3.9G   1% /dev
```

Any ideas?

Thanks for your help.
