I have been trying to find how to set User and Group quota inside a container but I can't seem to find a clear answer.

Normally I would do this in a fstab file but I'm not sure that works here. (What would be the /dev/sda1 ?)

Here is the command I would like to implement...
/dev/sda1 / ext3 errors=remount-ro,usrquota,grpquota 0 1

Sam

This way imposes limits from the outset.

vzyum <VEID> install quota
vzctl set <VEID> --quotatime 0 --quotaugidlimit 500 --save
vzctl restart <VEID>

How can I enable the quota without comitting to a predefined quota?

Sam

To enable quota for one guest, do

vzctl set <VEID> --quotaugidlimit 500 --save

That's it. You are not setting any quota with this. You are just limiting the number of different users that own files to 500.
