Hi,

trying to get iptables LOGging to work in a VE I get the famous error "iptables: Unknown error 18446744073709551615"

This is my setup:

The hardware node is:
Linux HN 2.6.9-023stab043.2-smp #1 SMP Fri Mar 9 11:50:20 MSK 2007 x86_64 x86_64 x86_64 GNU/Linux

the VE is:
Linux VE 2.6.9-023stab043.2-smp #1 SMP Fri Mar 9 11:50:20 MSK 2007 x86_64 x86_64 x86_64 GNU/Linux

This is what I do on the VE:

> iptables -v -A OUTPUT -j LOG
LOG all opt -- in * out * 0.0.0.0/0 -> 0.0.0.0/0 LOG flags 0 level 4
iptables: Unknown error 18446744073709551615

Questions: what is happening here? Does iptables work with OpenVZ/inside a VE? What configurations are required?
I am quite new with all this stuff...so if additional information is required please ask me.
Any help appreciated,
regards
