Hi Guys,
I'm planning to build a virtual cluster using the CAOS NSA linux distribution under OpenVZ.
Do you know if there exists some template/repository of that distribution?.
Any help in the matter will be welcome.
Thanks in advance.

Josep

See articles in http://wiki.openvz.org/Category:Templates to find out how to create your own templates. Those articles are distro-specific so you won't find an exact info about yours, but you should get some basic ideas.
