Hello ,

I'm working with Openvz & hypervm on Centos 5.2 x86_x64 HN .

I have little Problem on Vps Users . when i restart network in Ve see this error message :

```
[root@roza ~]# vzctl enter 140
entered into CT 140
[root@pardis /]# service network restart
Shutting down interface venet0:                            [  OK  ]
Shutting down loopback interface:                          [  OK  ]
Bringing up loopback interface:                            [  OK  ]
Bringing up interface venet0:  SIOCADDRT: Network is unreachable
SIOCADDRT: Network is unreachable
                                                           [  OK  ]
[root@pardis /]#
```

all thing is fine and Ve can ping outside :

```
[root@pardis /]# ping google.com
PING google.com (209.85.171.100) 56(84) bytes of data.
64 bytes from cg-in-f100.google.com (209.85.171.100): icmp_seq=1 ttl=243 time=54.4 ms
64 bytes from cg-in-f100.google.com (209.85.171.100): icmp_seq=2 ttl=243 time=54.1 ms

[1]+  Stopped                 ping google.com
[root@pardis /]#
```

but , Venet0 Ip adress is 127.0.0.1 and on the some of softwares like BIND (dns server) , get error :

rndc: connect failed: 127.0.0.1#953: connection refused

what's the problem ? where is the problem ?

Thanks

Please describe in detail how you configured network inside VE?

Do you have any custom settings? Did you modify any configuration files inside VE? Did you put any additional routes or another rules?
