Hello! I trying to create VM (by HyperVM) with IP from different network compared to my host machine, so, this VM should use another network GATEWAY than host, but it won't.
Simple example:
1. Host
IP: 10.0.0.10
Gateway: 10.0.0.1
1. VM
IP: 120.0.0.10
Gateway (should be): 120.0.0.1
Gateway (assgined by openvz): 10.0.0.1

So, can anyone help me to solve this?
Thanks
