Hi everyone,

I'm currently getting this error, "Unable to fork: Cannot allocate memory".

I ran "cat /proc/user_beancounters" on SSH with root and the results are below.

http://pastebin.com/m1aba4acc

I've read from http://forum.openvz.org/index.php?t=msg&goto=9094& and followed what they did mostly. Problem is I don't know if I should be allocating the same amount of memory, whatsoever. I'm really new to linux (and openVZ), hence, I hope what I said above would not offend the gurus out there.

Thanks.

Hi,

I think you'd better start with
OpenVZ User's Guide

It's a very nice guide to read. Everything is described intelligibly from the very beginning.
