Hi again !

doing test on my server, I make it hang (HN) running two commands like (in to a VE) :

dd if=/dev/zero of=test bs=1024 count=2000000 && time cp test /tmp/test

I was launched two times this command and my CPU reaches 100% and then it was impossible to take the control by SSH.

Its there a especial UBC parameter to restrict this ?? im trying with --ioprio but not seems to work.

Thanks.

Probably CPU parameters were not set properly.

Thanks.

Yeah, i'm testing with the options CPUUNITS, CPULIMITS and CPUS and it seems to be solved !
