Hi,

Would like to start with openvz but read on the wiki that tools don't allow creation of x86_64 templates. So my questions are :

- Could we create template to maintain x86_64 os in 64 bits mode ?
- Are all the tools working with it (live migration, dump & ...)

- benoît

Would like to start with openvz but read on the wiki that tools don't allow creation of x86_64 templates. So my questions are :

- Could we create template to maintain x86_64 os in 64 bits mode ?
- Are all the tools working with it (live migration, dump & ...)

I have x86_64 templates for EL4.6, 4.7, 5.2, 5.3 and
FC7 up to FC11

My production VZ are mainly 5.3...

you need to be in x86_64 to create x86_64 template.
