Hello Guys,
I tried to migrate virtuozzo linux container in openvz.I used the rsync command.And I thought that I migrated it successfully,
but When I tried to start the service of the container in openvz that I migrated.There is an error which is:

Container config file does not exist.
What is the problem.Need your opinion for this.
Thank you very much.

Ana

this means that container configuration file /etc/vz/conf/$VEID.conf does not exist.

So that means,I did not successfully migrated the config file or the config file of the container that is being migrated did not exist?
Example is container id is 150.conf.But I can see the config file in /etc/sysconfig/vz-scripts/.
I tried to migrate it again using rsync but that is the error again.

So is there anything that I can used to migrate it?
Thank you.
