Hi,

I am using Debian Lenny with 2.6.26-2-openvz-amd64 and vzctl version 3.0.23-1dso1. In the same machine I also have oracle 10g installed on the host, not within any container.
I assume the warning is related to the oracle listener - comm: tnslsnr Not tainted 2.6.26-2-openvz-amd64.

Can somebody help me here with information, how critical is this and how this will affect the machine availability?

Dear Andrey,

this definitely should processed via bugzilla.
Please, create a new bug report.
  http://bugzilla.openvz.org/
