Hi. Here is my 2.6.27.32 patch against 2.6.27-openvz-git-2009-07-21. There were some conflicts which I hope were solved in a right way. It runs now on one my server without any visible problem. I'm not a kernel hacker so no warranties.

Thanks. I will test this. I was planning on doing a git merge (I am no git expert) this week so you saved me from that and all the work of resolving conflicts..
