Subject: How to set mtu in a container

Hi to all,

This is my first post, in this forum, so please be lenient.

I have to change the mtu setting in a container and i was wondering if this parameter can be set in xxx.conf file, so that the setting can be remembered upon restart...
(I'm using v3.0.23 of vzctl)

I've read the docs/searched the web, but i couldn't find any indication on how to do it... Any ideas?

Thanks in advance,
Theodoros

ps. I suppose i could write a script, that would be executed upon starting the container, but if there is a parameter in the .conf file, i would prefer using it, because it is more 'clear'

Hello,

I'm afraid that the script is the best way to change MTU because there is no such parameter.

I'll probably go for the script, then. Thanks for the reply!
