Hello,

I have a problem with a VPS witch is used for mail system. It runs MySQL, postfix, dovecot...

Inside VPS are a lot of "defunct" zombie processes. I'm unable to stop with kill -9 any process inside and ouside the VPS.

In the VPS are no logs written since 7 hours... the complete system is hanging but i can enter and execute commands...

Stop any daemon prozess has no success....

can anyone help me?

When i stop the VPS:

Stopping VE ...
Unable to stop VE: operation timed out

some dmesg output (but this i since long time):

[4652860.924942] TCP: Treason uncloaked! Peer 92.228.xxx.xxx:1886/80 shrinks window 3151804145:3151818285. Repaired.
[4652987.804256] TCP: Treason uncloaked! Peer 92.228.xxx.xxx:1916/80 shrinks window 893619701:893633841. Repaired.

Hi,

kannst du ein vzctl --version und verwendete Linux Distri Deiner HardwareNode hier noch posten ...?

Danke & Gruß,
Thorsten
