Subject: secure.2, secure.3 are empty

good time

I noticed that the files
secure.2
secure.3
secure.4

are empty, 0 bytes.

Is it normal?

But secure.1 has some entries, this file was last changed 02.10.09.
On this day OVZ-kernel (rhel, on Centos5) has been updated. There is some connection? or should check the system to hacking?

Thank you.
