Hi !
When i do
cat /proc/user_beancounters
on my host system, i get this:

```
       0:  kmemsize        2716304    4984960 2147483647 2147483647          0
           lockedpages           0          0 2147483647 2147483647          0
           privvmpages       14289      42841 2147483647 2147483647          0
           shmpages            782        782 2147483647 2147483647          0

           dummy                 0          0 2147483647 2147483647          0
           numiptent            19         19 2147483647 2147483647          0
```

What is CT 0 ? Is it host system ?
Thank's for your answers

Thank you for your answer.
Value in column 5 are maximum values that system accepts ? Harware limitations ?
