Is there anywhere to get Debian compatible linux-headers for the rhel5 kernel. On the download page at: http://wiki.openvz.org/Download/kernel/rhel5/028stab064.7

which is what my host is running, there is only .RPM available. I have tried using alien to convert to a .deb and install but it only caused issues on my system and it didn't work.

I am running Debian 5 lenny 32bit on openvz

Hi,

I think that you can do it manually

- download the rpm
- # rpm2cpio ovzkernel-devel.rpm | cpio -id
