Has anyone else had this issue lately? I've installed openvz a million times (always on Centos 64-bit) and I've never ran into this...

After adding the openvz repo, yum isn't finding the 64 bit kernel at all:

```
########################
[root@customer ~]# yum install ovzkernel.x86_64
Loaded plugins: fastestmirror
Loading mirror speeds from cached hostfile
 * addons: ftp.osuosl.org
 * base: ftp.osuosl.org
 * extras: centosk.centos.org
 * openvz-kernel-rhel5: mirrors.unbornmedia.com
 * openvz-utils: mirrors.unbornmedia.com
 * updates: ftp.osuosl.org
Setting up Install Process
No package ovzkernel.x86_64 available.
Nothing to do
########################
```

The repo is definitely enabled...

```
########################
[root@customer ~]# yum repolist
Loaded plugins: fastestmirror
Loading mirror speeds from cached hostfile
 * addons: ftp.osuosl.org
 * base: ftp.osuosl.org
 * extras: centosk.centos.org
 * openvz-kernel-rhel5: mirrors.unbornmedia.com
 * openvz-utils: mirrors.unbornmedia.com
 * updates: ftp.osuosl.org
repo id                 repo name                       status
addons                   CentOS-5 - Addons                enabled:     0
base                    CentOS-5 - Base                 enabled: 2,535
extras                  CentOS-5 - Extras               enabled:   325
openvz-kernel-rhel5          OpenVZ RHEL5-based kernel          enabled:    14
openvz-utils             OpenVZ utilities                enabled:    26
updates                  CentOS-5 - Updates              enabled:   278
repolist: 3,178
########################
```

Anyone have a suggestion? Am I missing something obvious here?

I think the package is defined as "vzkernel" in some repos.

Try "yum search vzkernel" after enabling the correct repo for your distribution. Then, probably, you are going to find what you are want to install.

thanks. you are correct
problem solved
i found the detailed instruction on the following link
htt://www.howtoforge.com/installing-and-using-openvz-on-cent os-6.0
