How do i find the traffic per vps. Is there any way i can calculate total traffic used by indivdual vpses, and is there some way to set hard limit on the usage?

Thanks.

This is how you can account per-VE traffic:
http://wiki.openvz.org/Traffic_accounting_with_iptables

This is how you can limit the bandwidth:
http://wiki.openvz.org/Traffic_shaping_with_tc

If you need to limit the traffic, i.e. disable the networking for a VE if it is above the limit, you need to do some scripting in order to achieve it, e.g. put some cron job which checks the current usage and blocks the traffic to/from VE if limits are exceeded. In other words, if you are not sure how to do it, hire some sysadmin or a geek who can.

Hey, thanks,

I should done more research before asking the question.
