Hello

i have a big problem with one of my vpses that i can't do any thing with that server
i'm using Hypervm & CentOS 5.4

[root@216-18-202-98 lock]# vzctl restart 170
Restarting container
Stopping container ...
Container was stopped
Container is unmounted
Starting container ...
Container is mounted
Setting CPU limit: 800
Setting CPU units: 1000
Setting CPUs: 8
Configure meminfo: 255999744
Set hostname: serve.xxxxx.info
File resolv.conf was modified
Setting quota ugidlimit: 10000
Unable to create
bash: line 392: /etc/init.d/vzquota: No such file or directory
Container start in progress...

Also when i try to create an OS template for the vps from hypervm the template file grows to 1.4GB and then the process stop without completing

in Hyper there is options called "Recover Corrupted Vps" i think it's recover Corrupted system files i aslo run this but nothing happing

what i see in my hypervm that the vps ram is 0 MB 0 MB

please help
