I am wondering if there is a location to download kernel updates for both OpenVZ and Virtuozzo 3 for x86_64. Yum only shows the SMP kernel and I need the enterprise.

Is there even an enterprise kernel for x86_64?

I doubt there is anything else than repositories available from the main page. Did you look at these?

The current stable maintained kernel is here.

You might also want to post outputs of 'uname -a' and 'rpm -qa | grep kernel' so that someone can provide further advice. I assume you are running CentOS?
