...
OSTEMPLATE="debian-6.0-standard_6.0-1_i386"
ORIGIN_SAMPLE="pve.auto"
IP_ADDRESS="192.168.132.2"
HOSTNAME="mail_ldap"
NAMESERVER="192.168.133.3 192.168.133.2"
...
inside VPS /etc/hostname:
mail_ldap

what can it be?

Possible is was happen after "apt-get upgrade" inside VPS (debian update) on the other VPS of the same HN - all correct.

> HOSTNAME="mail_ldap"
> inside VPS /etc/hostname: mail_ldap

=> is allright, so the ct config value HOSTNAME, set the /etc/hostname in your running ct via the disto-scripts, so where's the prob.

Bye,
Thorsten

Hi,

please post: /etc/hosts of your ct:

vzctl exec <CTID> 'cat /etc/hosts'

and how are update your ct, via vzctl enter <CTID>; then apt-get update ...

or via vzctl exec <CTID> ...

have you restart the ct, and this error occurs again ?
vzctl --verbose restart <CTID>

Bye,
Thorsten

thanx for "--verbose"
it was invalid hostname error.

hostname can't consist "_" sign
