Hello, I have a problem with my server running openvz, I have 5 containers and I have running centos 5.4 in the main node and centos 5.2 in the containers. I have kernel: 2.6.18-164.15.1.el5.028stab068.9PAE #1 SMP

From time to time, the server crashes with a kernel panic and I have to reboot the main node, I can't attach images but this is one example of the kernel message:

Process MailScanner (pid: 8372, veid:406, ti: f2428000 task.ti: f2428000)
Stack: ...
Call Trace: ...
[<c0461d5b>] free_hot_cold_page +0xe6/0x13a
__pagevec_free
release_pages
free_pages_and_swap_cache
unmap_region
do_munmap
syscall_call
unix_getname
unix_getname
Code: ...
EIP: [<c0438783>] ub_page_uncharge +0x16/0x46 SS:ESP 0068: f2429ebc
Kernel panic not syncing: Fatal exception

This problem occurs randomly, this are the dates of the kernel panics recently:

-august 31 2009
-february 24 2010
-march 1 2010
-march 31 2010
-april 29 2010
-april 30 2010
-may 25 2010

Also, this are the last messages from the kernel in /var/log/messages:

May 25 14:16:06 vz-iv kernel: ========================

Ok, I already post it on bugzilla.openvz.org

Thanks
