Hello,

I run OpenVZ on SolusVM and I have some problem with host firewall.
What is the proper configuration of the SolusVM host firewall, basically I couldn't ping from VMs like also all the ports enabled on the VMs are still filtered so I added host's interfaces to trusted on its firewall and everything seem to be fine however I found this article (hxxp://www.centos.org/docs/4/html/rhel-sag-en-4/ch-basic-fir ewall.html) where it says:

Quote:Important
It is not recommended that you make any device that is connected to public networks, such as the Internet, a Trusted device.
- so what is the secure/proper configuration for this?
