Hi,

I am new to OpenVZ, I managed to get it working on Centos 4.3 (64bit). I mainly want the Host OS to be Centos, and all guest will be FC4/5 (64bit)

What I wanted to know was how would you make your own templates ? and also are 64bit guest OS's supported ? I.e will they have ful support (updating etc..)

I am currently having an issue were i cant have template cache for 64bit OS's ? when will this be available ?

Thanks

Snake

No replies ??

is there any time frame on when vzyum will work ?

Bumping this thread, I too would love to see vzyum working for x86_64 systems. I spent several hours hacking at vzyum myself but couldn't quite get it there.
