Hi all!

I have: SR2600URBRPR + 2xCPU Quad-Core Xeon E5620, Linux localhost.localdomain 2.6.18-194.17.1.el5.028stab070.7 #1 SMP Fri Oct 1 14:17:14 MSD 2010 x86_64 x86_64 x86_64 GNU/Linux
I have installed openvz and then kvm, all was OK. At firs I set up
guests on kvm - work perfect! but after I set up guests on openvz and spot that its see local network except guests of kvm and internet. But when I stop br0 (kvm bridge), guests of openvz work correct.
How resolve this problem? i need that kvm and openvz work correct together.

Thanks all!!
