Hello,

Can RAID1 be set up after openVZ or Virtuozzo has been installed or is it needed to install the OS by new?

You can,but the level of difficulty,will be how the one drive is laid out.
Do you want to have RAID1 for OS and OVZ?
Or do you want to mirror /vz?
It would have been better to create the array at installation,
or was this an after-thought?
Several docs exist on the Net,on how to perform this task,and are
OS specific.
