Full context in attachment.

It recognizes most of the errors as links for some reason ... guess maybe because it refers to a file and openvz.org but anyway the attachment has everything that showed in terminal.

File Attachments
1) openvz install log.txt, downloaded 471 times

Recent yum version has a diferent output, that's why this error rises:
setx86_64: line 90: [: too many arguments
This script needs a revision. I'm going to do it this weekend and I hope to have this working soon.

I upgraded setx86_64-0.5 script to setx86_64-0.6.
It should work now.
