Subject: Kernel Panic on vzctl stop

Hi,

Running CentOS 5.5 and just upgraded to the last OpenVZ kernel.
Upon reboot whenever I try to stop a container with:

vzctl stop xxx

HN hangs with 'Kernel panic - not syncing: Fatal exception' message.

I've attached a screenshot of the full message.

Any advice will be greatly appreciated.

Hmm, removing Ksplice Uptrack and rebooting seems to have fixed the problem.
