Please help. Updated OpenVZ. Rebooted the server and there is a problem. In some VDS lost DNS resolving(((and, in some it is.

OS: CentOS 5.5 Final

[root@hostname log]# uname -a
Linux hostname 2.6.18-238.5.1.el5.028stab085.3PAE #1 SMP Mon Mar 21 21:09:23 MSK 2011 i686 i686 i386 GNU/Linux

dmesg log:
ip_conntrack: parameter ip_conntrack_enable_ve0 is obsoleted. In ovzkernel >= 2. 6.15 connection tracking on hardware node is enabled by default, use ip_conntrac k_disable_ve0=1 parameter to disable.
ip_conntrack version 2.4 (8192 buckets, 65536 max) - 232 bytes per conntrack

[root@hostname log]# vzctl exec 110 ping lxcenter.org
PING lxcenter.org (66.197.145.22) 56(84) bytes of data.
64 bytes from srva.lxcenter.org (66.197.145.22): icmp_seq=1 ttl=47 time=35.7 ms

[root@hostname log]# vzctl exec 13066 ping lxcenter.org
ping: unknown host lxcenter.org

[root@hostname log]# vzctl exec 110 cat /etc/resolv.conf
[root@hostname log]# vzctl exec 13066 cat /etc/resolv.conf

Is there any difference?

And what about ping and traceroute from within problem VE to nameservers?

Try to remove all IPs from VE and re-add it again.

Did you remove and re-add IPs?
Does both VEs have IPs from one sub-net?

That's a problem of your network, while traceroute fails.

1. What if you traceroute from within the VE to 8.8.8.8?

tracert 8.8.8.8

2. Does both VEs have IPs from one sub-net?
