hello guys ) two month ago we added 4 gb ram to our server and it can allocate only 3.100gb from 4gb so i'm planning to install PAE module to use all 4gig but i don't know how can i install PAE with openvz kernel is there some official guides ?

btw when i'm searching PAE there is only two packages:
p xen-hypervisor-3.2-1-i386-nonpae - The Xen Hypervisor on i386 without pae
v xen-hypervisor-i386-nonpae -

Do i need some Openvz repos or something to install Openvz kernel with PAE or just a standard pae will work fine with my kernel.

Linux VPS 2.6.26-2-openvz-686 #1 SMP Thu Nov 25 02:12:20 UTC 2010 i686
I'm upgrading now to linux-image-2.6.26-2-686 kernel.

Which linux distro are you using? Where are you getting your openvz kernels from?

You need to use openvz kernel with PAE support. That is not a separate package, it's the kernel itself.

Hello Ales

My system is Debian lenny 5.0.8

Quote:You need to use openvz kernel with PAE support. That is not a separate package, it's the kernel itself.

I can't find openvz kernel with PAE support do i need some additional repos ? It's not in debian repositories.

Thanks
