Hello, I can't get networking working on my VPS. I've tried everything. The host uses DHCP to connect and obtain IP information.
Master:

Try stopping the CentOS firewall on your host.

ie:
$ service iptables stop

Try it:
sysctl net.ipv4.ip_forward=1

On the VM try:

iptables -F

Then when you reboot you lose connection again because it re-loads iptable rules. So you know you need to either disable iptables or change the rules.
