Subject: Container ebtables LOG are going to Hardware Node CT0 syslog

Hello
I am using openvz.
I am trying to setup a bridge inside a container/VZ with physical eth1 and eth2 attributed to br0.
ebtables is filtering GOOD.

The problem is in the LOG facility of ebtables. (generated by printk routine in the sources of the kernel patched with openvz)

ALL THE LOG strings are going to /var/adm/messages
of the Hardware Node and not to /var/adm/messages of the container.

Question: how to have a regular klogd/syslogd comportment
in order to get my logs in the container /var/log/messages

There are some other messages initiated by brctl that are going
to the Hardware Node CT0 too.

Please help to this issue.

Thank you
Gerard MAMOU
