Hi all

I have a container with Ubuntu 11.04

Not starting NFS kernel daemon: no support in current kernel (Linux 2.6.32-4-pve)

I have load the module nfs in host and adding this to container:

vzctl set 101 --features "nfs:on" --save
vzctl start 101

But when I try to restart nfs-server i get:

/etc$ sudo /etc/init.d/nfs-kernel-server restart
 * Stopping NFS kernel daemon
 [OK]
 * Unexporting directories for NFS kernel daemon...
 [OK]
 * Not starting NFS kernel daemon: no support in current kernel.

What is the problem??

Thanks

did you load nfs kernel module on HN ?

also, please read this first: http://wiki.openvz.org/NFS

Yes, in the HN

pve:~# lsmod | grep nfs

```
nfs                241322  0
lockd               58748  1 nfs
fscache             29178  1 nfs
nfs_acl              2031  1 nfs
auth_rpcgss         33300  1 nfs
sunrpc             164133  5 nfs,lockd,nfs_acl,auth_rpcgss
```

and the container:

```
pve:~# vzctl exec 104 cat /proc/filesystems
 ext3
nodev rpc_pipefs
nodev nfs
nodev sysfs
nodev proc
nodev tmpfs
nodev devpts
```

Any idea of what is happening?

Thanks
